

Linux Networking Commands Cheat Sheet

1. IP Address & Interface Management

`ip a`
Show all IP addresses and interfaces.

`ip link`
Show interface status (UP/DOWN, MAC).

`ip addr add 192.168.1.100/24 dev eth0`
Add IP to interface.

`ip link set eth0 up/down`
Enable or disable interface.

2. Routing Table & Gateway

`ip route show`
View current routing table.

`ip route add default via 192.168.1.1`
Set default gateway.

3. DNS & Hostname Tools

`dig google.com`
Query DNS info.

`dig +short google.com`
Short form output.

`host google.com`
Simple DNS lookup.

4. Connection Testing

`ping 8.8.8.8`
Test connectivity.

`ping -c 4 google.com`
Ping with 4 packets.

`traceroute google.com`
Show path to destination.

`mtr google.com`
Real-time path monitoring.

Linux Networking Commands Cheat Sheet

5. Port & Socket Checking

```
ss -tuln
    Show listening TCP/UDP ports.
ss -an
    Show all active connections.
```

6. Wireless Network Management

```
iwconfig
    Wireless settings.
nmcli device status
    Show interface status.
nmcli con up id "Wi-Fi 1"
    Connect to a known Wi-Fi.
```

7. Download & HTTP Testing

```
curl http://example.com
    Fetch URL content.
curl -I http://example.com
    Fetch HTTP headers.
wget http://example.com/file.zip
    Download file.
```

8. ARP Table

```
ip neigh
    Show ARP table (neighbor cache).
```

9. Firewall Rules (if applicable)

```
sudo iptables -L
    List firewall rules.
sudo iptables -F
    Flush all rules.
```
