

# Windows Networking Commands Cheat Sheet

## 1. IP Configuration

`ipconfig`

Show IP, subnet mask, and gateway.

`ipconfig /all`

Show detailed IP configuration.

`ipconfig /release`

Release DHCP IP address.

`ipconfig /renew`

Request new DHCP IP address.

`ipconfig /flushdns`

Clear DNS cache.

## 2. Ping and Traceroute

`ping 8.8.8.8`

Test connectivity.

`ping www.example.com`

Ping domain name.

`tracert www.example.com`

Show route to host.

## 3. DNS Tools

`nslookup www.example.com`

Resolve domain to IP.

`nslookup`

Start interactive DNS query mode.

## 4. Viewing Network Connections

`netstat -an`

Show all connections and ports.

`netstat -b`

Show programs using each connection.

`netstat -r`

Show routing table.

# Windows Networking Commands Cheat Sheet

## 5. Routing Table

```
route print
```

Show routing table.

```
route add <network> mask <mask> <gateway>
```

Add a static route.

## 6. ARP Table

```
arp -a
```

View ARP cache.

```
arp -d <ip>
```

Delete ARP entry.

## 7. Port Connectivity

```
telnet <host> <port>
```

Test if port is open (may need to enable telnet).

## 8. Network Configuration & Diagnostics

```
netsh interface ip show config
```

Show interface IP settings.

```
netsh wlan show profiles
```

Show saved Wi-Fi profiles.

```
netsh wlan show interfaces
```

Show Wi-Fi interface info.

## 9. MAC Address

```
getmac /v /fo list
```

Show MAC addresses of interfaces.

## 10. GUI Tools Shortcuts

# Windows Networking Commands Cheat Sheet

`ncpa.cpl`

Open network connections panel.

`wf.msc`

Windows firewall with advanced security.

`services.msc`

Manage network-related services.
